Frequently Asked Questions about TechCorp's AI Solutions:

Q: What machine learning frameworks do you support?

A: We work with TensorFlow, PyTorch, scikit-learn, XGBoost, and other popular frameworks. Our platform is framework-agnostic and can deploy models from any major ML library.

Q: How do you ensure data security?

A: We implement enterprise-grade security measures including end-to-end encryption, secure API endpoints, and compliance with SOC 2 and GDPR standards. Data is never stored longer than necessary for processing.

Q: What types of AI models can you develop?

A: We develop various types of models including predictive analytics, natural language processing, computer vision, recommendation systems, and time series forecasting models.

Q: How long does a typical AI project take?

A: Project timelines vary based on complexity. Simple models can be developed in 2-4 weeks, while complex enterprise solutions may take 3-6 months. We provide detailed timelines during our initial consultation.

Q: Do you provide model interpretability features?

A: Yes, our platform includes built-in explainability tools that help you understand how models make decisions. This is especially important for regulated industries.

Q: Can you integrate with existing systems?

A: Absolutely. Our solutions are designed to integrate seamlessly with existing enterprise systems through APIs, databases, and various integration methods.
